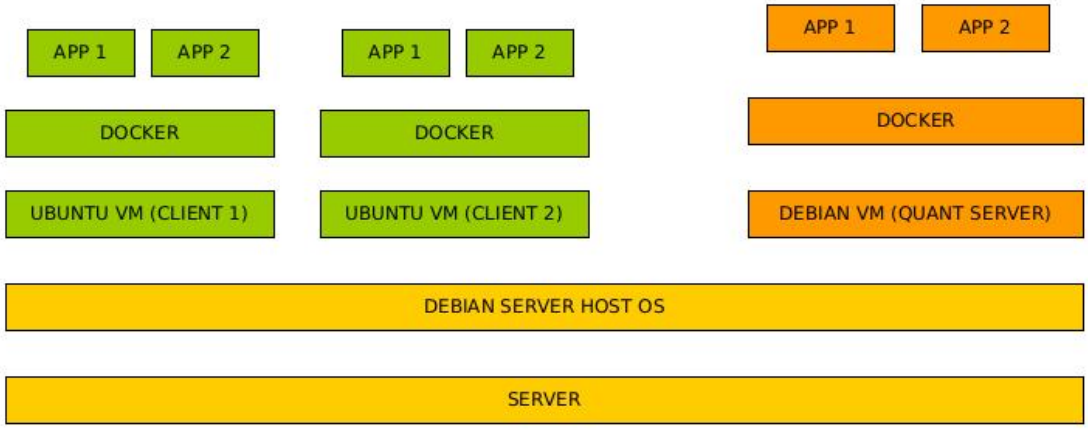
Swapnil Sonawane
Quantitative Trader South Delhi, Delhi, India

https://www.linkedin.com/in/swapnil-sonawane-53763116/

1 VIRTUALIZATION



I designed the quant trading infra from the scratch using open source software at a prop desk.

On premise custom built desktop.

- CPU : AMD RYZEN 5950x 32 Threads @ 4.9Ghz max
- MOBO : Asus Prime X570-p
- RAM : 64GB DDR4 RAM @ 3200Mhz
- HDD : 2 X 4TB
- Cooling : Deep Cool L360RGB Liquid cooler
- Power : Deep Cool 850W Gold SMPS

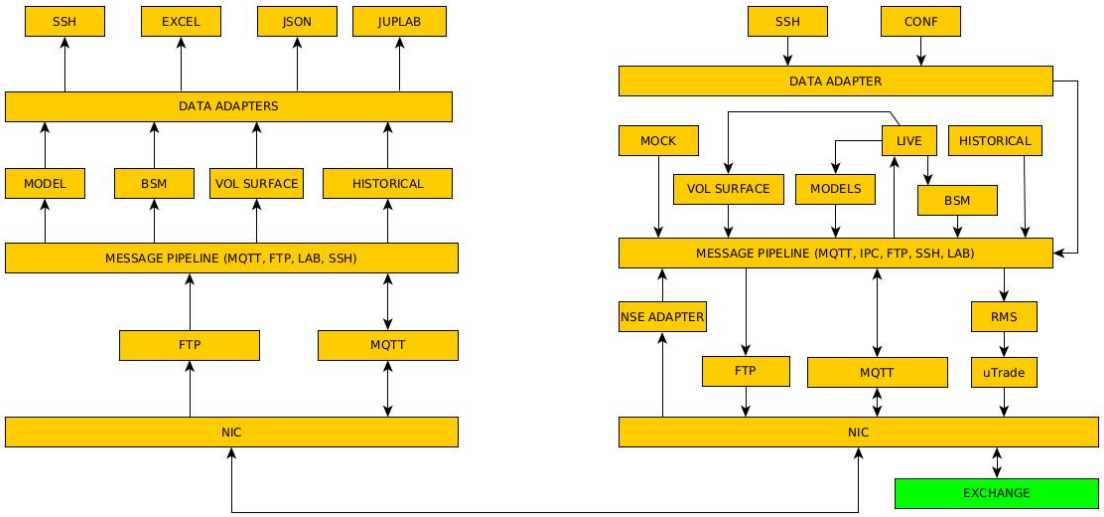
The CPU uses debian server as host operating system and KVM for virutalization. It is designed to be a portable quant research lab.

QUANT CLIENT VM (green) are accessed by traders for model building and monitoring production environment.

QUANT SERVER VM (orange) acts as the central brain of the operation. All data crunching, algo products, market data feed and order execution systems sit here.

2 INFRASTRUCTURE

LEFT QUANT CLIENT VM <=====> RIGHT QUANT SERVER VM



- NIC : Network Interface Card
- Message Pipeline : Communication protocols available
- Data Adapter : User Interface to the system
- Exchange : Market data and order execution venue
- MQTT : Lightweight messaging protocol
- FTP : File Transfer Protocol
- RMS : Firmwide Risk Management System
- uTrade : Low Latency Order execution API
- NSE Adapter : Reads market data from exchange
- Live : Market data broker
- BSM : Black Scholes Model to price derivatives
- Historical : Historical market data archives
- Vol Surface : Volatility surface for pricing options
- Mock : Mock trading or paper trading service
- Models : In-production Fully automated algo trading models
- SSH : Used to access remote shell
- Conf : Configuration file for different services and job schedulers
- Juplab : Remotely hosted Jupyter Notebooks for research
- Excel : Excel sheets for use as live dashboard

3 OPTION STRUCTURING ENGINE

The firm trades a lot of options strats and needs option valuation tools and pricing these baskets as well as simulate these baskets to different market vol regimes

Each color represents the payoff of a multi-leg option basket designed to capture implied and realised variance of the underlying under different market volatility regimes

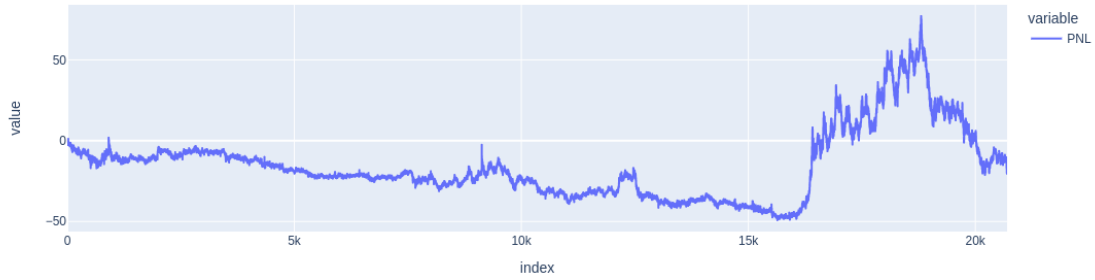
The derivatives structuring engine is used to automatically price and compare payoffs available for different multileg option baskets at different strikes where 0 represents ATM.

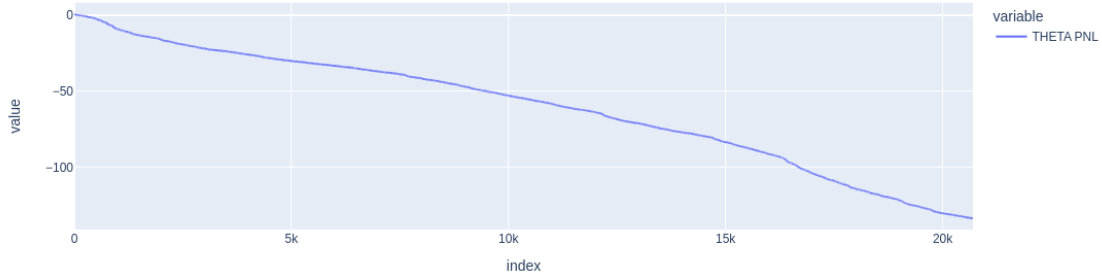
4 GREEK PNL ENGINE

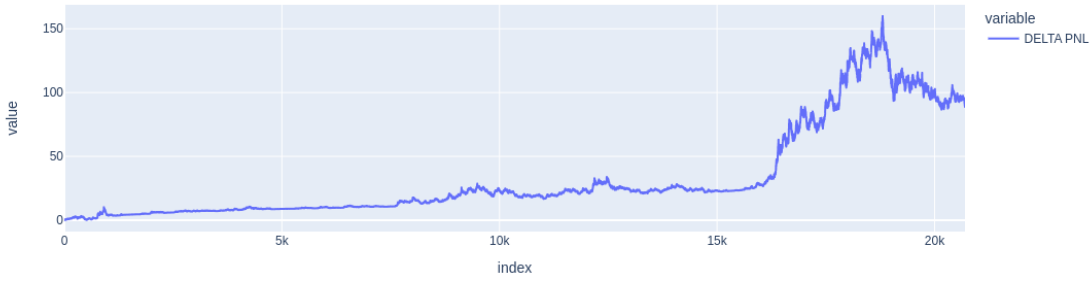
Allows you to understand the PnL performance of the option basket in live markets and historical data.

Tool based on the famous Option Profit and Loss Attribution and Pricing: A New Framework by Peter Carr.

Visualize the options payoff over time based on separate greek exposure.







5 REALTIME GREEK SENSITIVY CALCULATIONS

```
%%time
for i in range(100000):
    option_type = 'put'
    strike = 17200
    underlying_price = 17215.75
    days_to_expiration = 7
    price = 218.60
    dividend = 0
    output = KK_BSM(option_type, strike, underlying_price, days_to_expiration, price, dividend)
```

```
CPU times: user 522 ms, sys: 27 µs, total: 522 ms
Wall time: 522 ms
```

```
output
```

```

6 MARKET DECODING ADAPTER

Used to read byte encoded market data from NSE

```
// Structures for decoding trimmed data from exchange
struct BcastPackData
{
    char cPackData [512];
    short iNoPackets;
    short iCompLen;
    char cCompData[512];
    short CompressionLen;
    char BroadcastData [8192];
} packed_data;

struct BCAST_HEADER
{
    long LogTime;
    short TransactionCode;
    short MessageLength;
    char BCAST_HEADER[40];
} bcast_header;

struct BCAST_ONLY_MBP
{
    char BCAST_ONLY_MBP[470];
    short NoOfRecords;
} bcast_mbp;

struct INTERACTIVE_ONLY_MBP_DATA
{
    char INTERACTIVE_ONLY_MBP_DATA[213];
    long Token;
    short BookType;
    short TradingStatus;

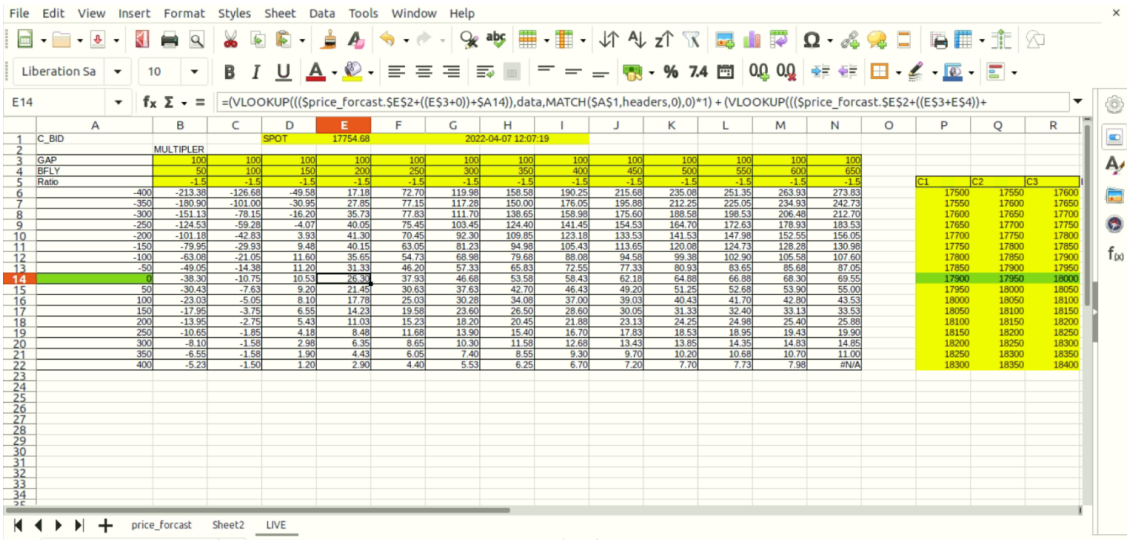
    long VolumeTradedToday;
    long Quantity[2];
    long Price[2];
} i_mbp[2];
//
```

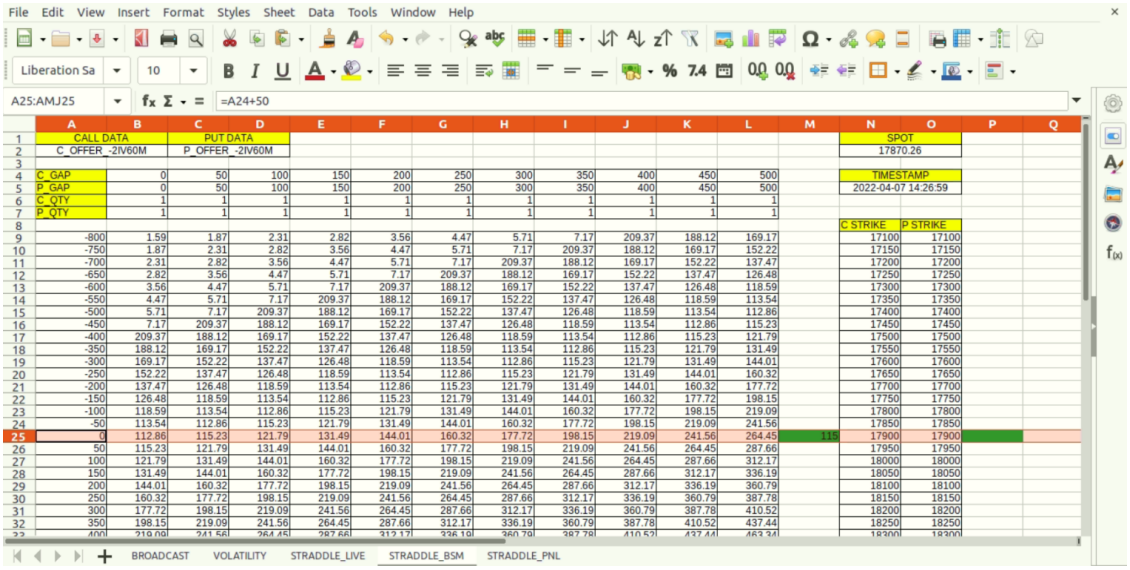
7 BUILDING EXCEL FOR LIVE TRADING

Built excel tools for windows users.

Live excel pricing for trading complex multileg option baskets.



Option strategy simulation inside excel



8 MULTITHREAD BACKTESTING

Expertise in quant research and algo strat development and model validation
